

Adding "GoogleServices-Info.plist" correctly to iOS

I'll also show this later in a lecture but in case you try running the app on an iOS simulator or device and you're getting an error right now, make sure you add "GoogleServices-Info.plist" to the iOS project by:

- 1) Opening XCode and opening the iOS folder as a project there
- 2) Adding the "GoogleServices-Info.plist" file via "Add Files" (right click on "Runner" in the left bar and choose "Add Files to 'Runner'") => Select the "GoogleServices-Info.plist" file
