Important: Flutter Firebase Versions

In the next lecture, we'll add Flutter Firebase packages (`cloud_firestore`).

To **follow along smoothly**, make sure you use the **same version as I use** in the lectures: **0.13.x**, **NOT 0.14.x or higher**.

In your `pubspec.yaml` file, you should therefore have an entry like this:

```
1.  cloud_firestore: 0.13.5
```

You find a **lecture where we update to the latest versions later in the module** - so for now, follow along with the above version!
